RE: City Water Line Improvement Project - 2010

To Whom It May Concern:

In the next few weeks, the City of Belgrade will be improving utilities in the street right-of-way adjacent to your property. The projects priority is to benefit the entire water system by replacing existing undersized, leaking water lines with larger water lines. This will improve the local water supply by minimizing leakage and increasing fire flows. Other work in the street right-of-way includes asphalt replacement, sewer main repairs, and storm water improvements.

Included in this project is the replacement of your water service line and a new curb stop valve from the water main to your property line. The construction plans specify the new portion of the service line to be ¾ inch. If you have plans for future development of your property that will require a larger domestic water service or a fire suppression line please contact the Public Works Department prior to the start of construction. During project construction, the Contractor will provide temporary water services to all customers and private property owners whose service may be interrupted for more than 4 hours. If service is to be interrupted at all, the Contractor shall notify each customer a minimum of 24 hours and not more than 72 hours prior to the interruption of service. Notification shall be by personal contact and distribution of notice at each door plus notice by an advertisement in the local paper.

The contractor will set up traffic control signs throughout construction to notify the public of street closures and detour routes. Temporary closures of streets and driveways will occur during the contractors working hours; however, access to each property will be maintained each evening unless agreed upon otherwise by the property owner.

The limits of the street right-of-way boundary were determined during the survey, topographic mapping, and plat research portion of the design. The street right-of-way boundary is located at your private property line. You may have personal property, fences, lawn or landscaping located beyond the limits of your property line that will be impacted during construction. If this is the case, please contact Public Works Director Steve Klotz so you can discuss the best way to remedy the situation prior to the start of construction.

The City has retained the services of TD&H Engineering for the design and inspection portions of this project. If you have any questions or concerns concerning the project, you may contact Steve Klotz, Public Works Director at City Hall, 388-3760, or Shannon Holmes or Keith Waring of TD&H Engineering at 586-0277. Thank you for your cooperation.

Sincerely,

Joseph A. Menicucci
City Manager
